Kali ini saya diminta untuk mengaktifkan 2 line internet (ISP) yang dipisahkan untuk 2 LAN yang berbeda. Topologinya adalah seperti ini: Dari topologi tersebut dimaksudkan bahwa user dengan IP 192.168.1.1/24 menggunakan ISP dengan IP 103.78.123.194/28 sebagai koneksi internetnya. Begitu juga user dengan IP 192.168.88.1/24 menggunakan ISP dengan IP 119.110.123.70/30 sebagai koneksi internetnya …

Memisahkan 2 Line Internet untuk 2 LAN di 1 Mikrotik …
So far I've configured the network to use one of those public IP and use it for 2 subnets (192.168.85.X and 192.168.5.X) wich are isolated from each other and both can access internet. What I'm trying to achieve is to add a second WAN ip to the same interface, and route traffic to a specific server to use that IP.

Regarding your second question, in MikroTik site-to-site IPsec, there's no initiator or receiver, so if the other end's router is a non-MikroTik one, set that router as the initiator. In other hand if both end router is MikroTik, as long as the phase 1 and phase 2 matches, the IPsec tunnel will be established.
