Data Model. The core model abstraction in the jsPlumb Toolkit is that of a Graph, or more properly, a Directed Graph, as discussed here: [http://en.wikipedia.org/wiki/Directed\\_graph](http://en.wikipedia.org/wiki/Directed_graph). A Graph is a collection of Nodes, Groups, Edges and Ports. Nodes map to entities in your data model.

Imagine the simple email application. We have stored addresses, and probably some documents.

### **Data Modeling for Data Warehouses**

Efficiently allocate staff and budget resources by weighing a simple model's level of accuracy and cost against increasingly those of more sophisticated models. Is the incremental gain in accuracy of a particular model worth the incremental increase in cost? For more guidance and EPA modeling tools visit the Green Infrastructure Modeling Toolkit.

### **Green Infrastructure Modeling Tools | US EPA**

The Model. The model is what I like to refer to as the domain object. The model represents the actual data and/or information we are dealing with. An example of a model might be a contact (containing name, phone number, address, etc) or the characteristics of a live streaming publishing point.
